

CampusHub – University Management Portal

Project Overview

CampusHub is a full-stack university management system built with React, Django REST Framework, and PostgreSQL. It provides separate dashboards for administrators, lecturers, and students.

Objectives

- Digitize student and course management.
- Manage attendance, grades, and timetables.
- Provide secure role-based authentication.
- Offer reports and analytics.

Technology Stack

Frontend: React, Tailwind CSS, Axios
Backend: Django, Django REST Framework
Database: PostgreSQL
Authentication: JWT

Modules

Admin: Manage students, lecturers, departments, courses.

Lecturer: Upload notes, record attendance, enter grades.

Student: Register, enroll in courses, view grades and timetable.

Expected Outcomes

A secure, responsive web application that simplifies university administration and improves communication between students, lecturers, and administrators.
